COFFEE SHOP MANAGEMENT SYSTEM

Name: Ritesh Ramdas Pokharkar

Div: B

Enrollment Number: 2102894

Class: TYBBA(CA)

Project Guide: Prof. Gauri Khire Patil

Synopsis

EXISTING SYSTEM

Navigating the complexities of managing a coffee shop requires a meticulous approach to compliance and legalities. Current systems may involve manual documentation, potentially leading to legal

challenges, errors, and lapses in compliance. Handling staff management, customer relations, product offerings, order processing, financial reporting, and other aspects demands a thorough understanding of legal implications.

Drawbacks :

- Compliance issues in staff management.
- Customer data protection and privacy concerns.
- Product labelling and safety standards.
- Order processing and contractual obligations.
- Financial reporting and tax compliance.

PROPOSED SYSTEM

The Pizza and Shake Store Management System, developed with HTML, CSS, JavaScript, PHP, and MySQL, incorporates legal considerations into daily operations. The system aims to ensure legal compliance, mitigate risks, and streamline processes, providing a robust foundation for managing legal aspects in a coffee shop

Advantages : Ensured Data Security, Accelerated Processes, Error-Free Operations, Capability to Handle Large Datasets, Enhanced Accuracy and Efficiency, Simplified Record Retrieval, Improved Management Practices, Substantial Manpower Savings, Seamless Daily Reporting.

FORM DESCRIPTION

1.Login:

This module ensures a secure access point to the system, requiring user authentication through a designated user ID and password, enhancing overall system security.

2.Admin Dashboard:

Serving as the nerve center of the system, the Admin Dashboard provides a comprehensive overview and control center for managing all facets of the Coffee Shop operations, ensuring centralized and efficient administration.

3.Staff Management:

Add Staff:

Enables the addition of new staff members to the system, facilitating a seamless onboarding process.

Update Staff:

Allows for the modification of existing staff details, ensuring accurate

and up-to-date records.

Delete Staff:

Permits the removal of staff records when necessary, maintaining data integrity and relevance.

4.Customer Management:

Add Customer:

Facilitates the inclusion of new customer information, capturing essential details for effective customer management.

Update Customer:

Provides functionality to modify and keep customer records current, enhancing customer relationship management.

Delete Customer:

Allows for the removal of customer data when required, ensuring a streamlined and accurate customer database.

5.Product Management:

Add Product:

Permits the addition of new products to the inventory, supporting the dynamic expansion of the store's offerings.

Update Product:

Enables real-time updates to product details, ensuring accuracy in product information management.

Delete Product:

Facilitates the removal of products from the system when necessary, maintaining an organized and relevant product catalog.

6.Order Management:

Add Order:

Streamlines the process of adding new orders to the system, ensuring efficient order processing.

Update Order:

Allows for the modification of existing order details, accommodating changes in real-time.

Delete Order:

Permits the removal of orders from the system when needed, maintaining accurate and up-to-date order records.

7.Report:

Order Report:

Generates detailed reports on order-related metrics, providing valuable insights into the store's performance.

Payment Report:

Generates comprehensive reports on payment transactions, aiding in financial analysis and accountability.

8.Search:

Offers an advanced search functionality, allowing users to swiftly locate specific information within the system, enhancing overall efficiency.

9.Receipt:

Enables the printing of detailed receipts for completed orders, ensuring clear documentation and customer satisfaction.

FUTURE ENHANCEMENT

The Coffee Shop Management System can evolve to address emerging legal requirements and challenges in the food industry. Future enhancements may include:

- Integration with emerging data protection laws.
- Advanced compliance analytics and reporting.
- Dynamic legal document generation based on changing regulations.
- Legal training modules for staff on relevant laws and regulations.

This system is designed to provide not only efficient management of Coffee Shop operations but also a legally robust framework, ensuring the business operates within the bounds of the law and adapts to evolving legal landscapes.

SOFTWARE REQUIREMENT

Front end :- Visual Studio Code

Back end :- SQL , PHPMYADMIN

HARDWARE REQUIREMENTS

Processor: Intel(R) Dual Core

Operating System :- Windows 7

RAM :- 4.00 GB

Hard Disk :- 80 GB
