ACKNOWLEDGEMENTS

We have a great pleasure to present this project on-

Coffee shop

We have thankful to **P. E. Society's Modern College of Arts, Science & Commerce, Shivajinagar, Pune-41005**. For giving us the opportunity to carry out **B.B.A(C.A) (Sem-VI)** project at their concern.

Many people have contribution in this project report, we are grateful to **Prof. M.D.Alandikar**, the Vice-Principal for his co-operation. Our special thanks to ***Prof.Gauri Khire ma'am*** for his/her constructive suggestions and comments and for lending her expertise and talent when needed. And above all, we thank the Almighty for his grace and blessings.

Finally, we would like thank each and everyone who was directly or indirectly involved with this project report.

1.Introduction

Introduction to system

A coffee shop management system is a software application designed to streamline and automate various aspects of running a pet store. It typically includes features such as inventory management, sales and customer management, appointment scheduling, and sometimes veterinary record keeping. This system helps pet shop owners efficiently manage their business operations, maintain accurate records, and provide better service to customers and their pets. It can also assist in tracking product expiration dates, managing finances, and analyzing sales trends. The primary goal of such a system is to enhance the overall management and profitability of a pet shop while ensuring the well-being of the animals in its care.

It's a Time Saving Technology.

We have :-

1.Quick Access to information

2.Employee Management

3.Supplier Management

4.Automated Inventory Updates

5.Reduced Administration Tasks

Pett shop management system can streamline various tasks, making operations more time-efficient and enabling staff to focus on providing better service to customers.

❖ Scope of System

A coffee shop management system typically involves various features and functionalities to streamline the operations of a pet shop

- Inventory Management: This encompasses tracking and managing the stock of pets, pet products, food, toys, and other related items. It includes features for adding new items, updating quantities, and managing product details.
- Sales and Billing: The system facilitates sales transactions, generates invoices, and provides options for different payment methods. It can also calculate taxes and discounts.

Advantages of Pet Shop Management.

- Customer Database: It allows you to maintain a database of customer information, purchase history, and preferences, which can help with personalized service and marketing.
- Appointment Scheduling: Some systems include features for scheduling pet grooming or vet appointments, making it convenient for customers and efficient for the shop.
- Reporting and Analytics: You can generate reports on sales, inventory turnover, and customer trends, which can help in making data-driven decisions.
- Barcode Scanning: Many systems support barcode scanning, which speeds up the checkout process and reduces the risk of manual entry errors.
- Employee Management: It can assist in managing employee schedules, commissions, and performance, which is beneficial for staff and business owners.
- Supplier Management: It helps in managing relationships with suppliers and ordering products when needed.
- Security and Data Backup: Most systems provide data security and backup features to protect customer and business data.
- Streamlined Operations: Overall, it improves the efficiency and organization of a pet shop,ultimately leading to better customer service and increased profitability.

- The scope of a pet shop management system can vary based on the specific needs and size of the pet shop. It aims to improve operational efficiency, customer service, and overall management of the business.

❖ Proposed System

The aim of proposed system is to develop a system of improved facilities. The proposed system can overcome all the limitations of the existing system.

The system provides proper security and reduces the manual work. The existing system has several disadvantages and many more difficulties to work well.

The proposed system tries to eliminate or reduce these difficulties up to some extent.

The proposed system will help the user to reduce the workload and mental conflict.

The proposed system helps the user to work user friendly and he can easily do his jobs without time lagging.

A proposed pet shop management system should encompass various features and capabilities to address the specific needs of the pet shop.

We have:

1.User Authentication

2.Inventory Management

3.Point of sale

4.Customer Management

6.Vendor Management

7.Veterinary Integration

The proposed pet shop management system includes features like inventory management, point of sale, customer and pet records, appointment scheduling, vendor management, reporting, loyalty programs, online presence, security, and mobile app integration to streamline operations and improve customer service.

2.Analysis

❖ Fact Finding techniques

Fact-finding techniques are methods used to gather information and understand the requirements and processes of a system. In the context of a pet shop management system.

Some commonly used fact-finding techniques are :

1.Interviews

2.Questionnaires & Survey

3. Observation

4.Document Review

5.Workshops

1.Interviews: Conduct interviews with key stakeholders, such as pet shop owners, employees, and customers, to gather firsthand information about their needs, preferences, and pain points.

2.Questionnaires and Surveys: Distribute structured questionnaires or surveys to collect data from a broader audience, allowing you to gather quantitative and qualitative insights.

3.Observation: Observe how the pet shop currently operates, including how employees interact with customers, how inventory is managed, and how appointments are scheduled.

4.Document Review: Analyze existing documents, such as sales records, customer records, and inventory reports, to gain insights into current processes and data requirements.

5.Workshops: Conduct workshops with cross-functional teams to collaborate on defining requirements, processes, and system objectives.

❖ Feasibility Study

Feasibility study is the system proposal according to its work ability impaction the organization to meet the user needs and effective use of the resources.

The following point need to be considered while studying the feasibility of the proposed system.

1.Technical feasibility:

The proposed system that has developed is found technology feasible for the Pet shop system. The hardware and software resources are easily available to the branch. The staff has efficient knowledge of hardware and software technology, so there is no need to depend on outside experts.

2.Operational feasibility:

Operational feasibility measures of how will the applications well work in organization. Required operational skills and expertise is already been available with the firm.

Operational feasibility of the system can be ensuring through the following:

User friendliness of the proposed system makes the user to do the work efficiently

System work smoothly without any difficulties.

Well documentation of the proposed system gives complete idea about the system design to the user.

So the proposed system has the support by applicants who makes application. So the system is operationally feasible.

3.Economic feasibility:

Economic feasibility is most important from the point of any system. Before finalizing the decision it should be seen that whether the proposed system is financial viable or not. Cost-benefit analysis is required to be carried out. In case of the present system, it found as the firm's business is increasing day to day they should go far computerized system.

The cost of hardware and software is affordable to the branch. The cost of development and maintenance of the system is justifiable to the use and benefits of the owner.

As the existing system will be replace by the computerized one the computerized one the complexities and difficulties will be reduced significantly.

❖ Hardware & Software Requirement

SOFTWARE REQUIREMENT

Front end:- HTML,CSS

Back end:- PHP ,SQL

HARDWARE REQUIREMENT

Processor:- Intel Core i3.

Operating System:- Windows 10.

RAM:- 4 GB.

Hard Disk:- 80GB.

6.Advantages & Limitations

Advantages:-

- Less Paperwork
- Reduce Staff Head Count For Jobs
- Reduce Expenses
- Increase Staff Efficiency
- Low Maintenance Cost
- Speed Up Operation

Limitations:-

- No SMS/WhatsApp Base Appointment
- No Appointment Reminders

7.Future Enhancement

In the future, the coffee shop management system can be further enhanced to incorporate advanced features and technologies, providing an even more seamless and efficient experience for both the pet shop owners and their customers.

Some potential future enhancements include:-

1. Mobile App.
2. Automated Ordering and Restocking.
3. Customer Loyalty Program.
4. Social Media Integration.
5. Online Appointment Booking.
6. Multi-Language Support.
7. Artificial Intelligence (AI) Integration.

These enhancements can elevate the pet shop management system to a new level, creating a more modern and customercentric experience while optimizing business operations and increasing overall efficiency for the pet shop owners.
